

Spots and Discolorations in the Ear

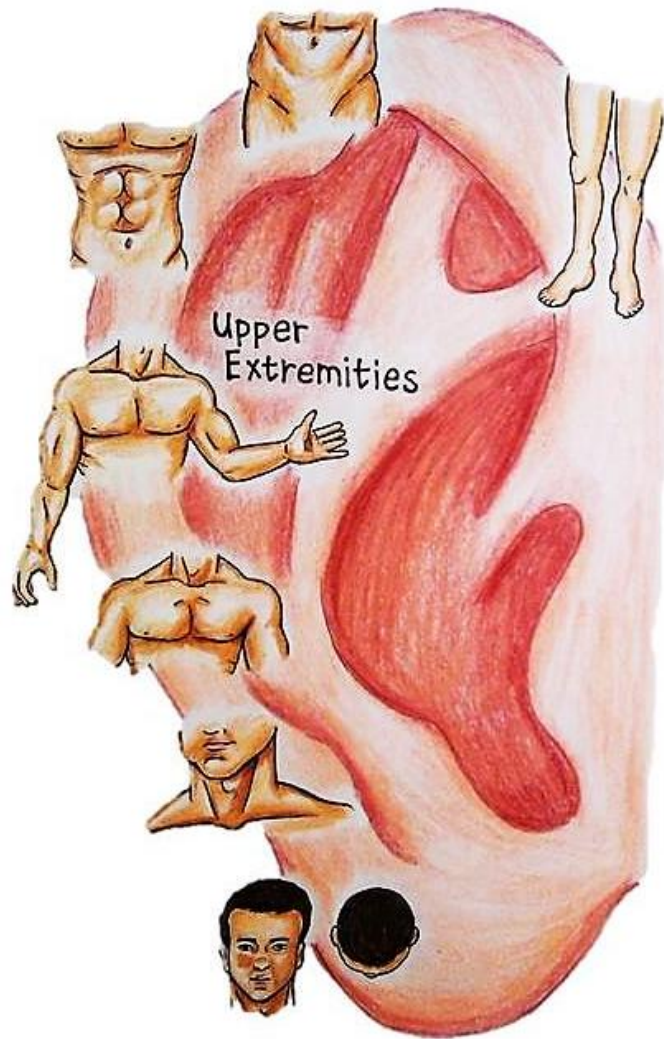

Body scars can show up on the other part of the ear (the helix). Either from surgeries or trauma scars. These scars can affect your treatments and not Address the deeper underlying pathology. If your results are temporary There is a good chance you might have a toxic scar on the body that's causing this. These scars will sometimes show up on the ear in the area that corresponds to The area body the body that has the toxic scar. If it does manifest on the ear you Can treat the marks/spots with electrical stimulations with a point stimulator. The key to this treatment is to have a point stimulator that can deliver Nogier's c through G frequencies (10 to 160 Hz).
